Product Information

Successfully established on the market and now also available in granulate form: Jowatherm-Reaktant® 608.00 for edgebanding.

Detmold, July 1, 2016 – The unfilled polyurethane hot melt adhesive (PUR) which has been introduced at the start of the year is characterised by a wide range of adhesion and an excellent thermal stability, and meets highest demands in edgebanding. With the first unfilled PUR granulate worldwide, Jowat facilitates an easy entry into the popular PUR technology for first-time processors and smaller enterprises.

Jowatherm-Reaktant® 608.00 has already been used successfully in edgebanding since the start of the year. Now, Jowat has introduced a granulate version of the unfilled PUR hot melt, which can be processed on all standard edgebanding units. The translucent adhesive film of this product provides an almost invisible bondline. The adhesive can be processed without additional investments on existing applicators, only a non-stick coating on the inside of the unit is required. A special melter is not needed. Therefore, this hot melt facilitates an easy introduction to PUR technology, especially for first-time processors and smaller companies that want an adhesive which provides a superior edgebanding result from both a visual and a technical point of view.
