

Sustainable Occupational Safety with Jowat PUR Hot Melt Adhesives for Edgebanding

Detmold, 27 September 2021 – The adhesives manufacturer Jowat from Detmold actively contributes to the improvement in occupational health and safety in the wood and furniture industry by supplying PUR adhesives that are not subject to hazard labeling – with optimum performance and reduced costs of investment.

The Jowatherm-Reaktant® MR product family of Jowat provides a wide range of monomer-reduced and therefore hazard-free PUR hot melt adhesives for all established applications in the wood and furniture industry. They are part of the “Green Adhesives” series, a comprehensive portfolio of sustainable adhesive solutions from Jowat, and have been developed to facilitate more responsible and more environment-friendly bonding processes.

“We supply a wide range of products with hazard-free labeling for edgebanding, from so-called ‘all-rounders’ to premium solutions for through-feed units and to BAZ solutions for edgebanding molded parts. Our goal is to provide our customers with a broad spectrum of alternatives to conventional PUR adhesives without compromising the adhesive performance,” explains Tim Rosenthal, Product Manager at Jowat SE.

Apart from health and safety considerations, a change to monomer-reduced hot melt adhesives therefore also provides further benefits and can reduce investment and process costs. Products from this series are not subject to the forthcoming statutory training requirement under REACH. At the same time, the high initial strength and short setting times of the modern adhesives facilitate clean and efficient manufacturing processes. From the technical point of view, the change is very easy. All that is needed is a few adaptations to the settings of the existing machines.

In the pursuit of sustainability with the “Green Adhesives” label, Jowat focuses not only on the adhesive itself but also on facilitating a bonding process as friendly as possible to the environment and to resources. To the adhesives expert from Detmold, a comprehensive portfolio of hazard-free, powerful PUR hot melt adhesives is therefore a consistent and major step into the future of bonding. Because enterprises can make a significant contribution to the protection of their employees with a very easy change to monomer-reduced hot melt adhesives.

Introducing Jowat

Jowat SE with headquarters in Detmold is one of the world's leading suppliers of industrial adhesives. These are mainly used in woodworking and furniture manufacture, in the paper and packaging industry, for graphic arts, in the textile, automotive as well as in the electrical industry. The company was founded in 1919 and has manufacturing sites in Germany in Detmold and Elsteraue, plus three other producing subsidiaries, Jowat Corporation in the USA, Jowat Swiss AG, and Jowat Manufacturing in Malaysia. The supplier of all adhesive groups is manufacturing over 90,000 metric tons of adhesives per year, with more than 1,200 employees. A global sales structure with 23 subsidiaries plus solution partners is guaranteeing local service with close customer contact.
